

Computer Program Exercise #2

Live Script and Cell Array

Create a Live Script and name it “cpe2.mlx”

- a) Create a **3x8** array called **w** with random numbers
- b) Create an *empty* 2x2 Cell Array called **A**
 - 1) Fill position 2x1 of Cell Array **A** with the last three columns of **w**
 - 2) Fill position 1x1 of Cell Array **A** with the string: **I am string**
 - 3) From position 2x1 of Cell Array **A**, retrieve the numbers from rows 2 and 3 and columns 1 and 2
